

The Advantages of Using MiniFIBERS' SHORT CUT POLYESTER FIBERS in Stucco and Concrete

CONTROLS CRACKING

The addition of MiniFIBERS' cut Polyester fibers in concrete products and stucco prevents cracking caused by volume change.

INCREASES FLEXIBILITY

The use of MiniFIBERS' cut Polyester fibers has demonstrated an increase in flexural strength in concrete products and stucco.

REDUCES WATER PERMEABILITY

The use of MiniFIBERS' cut Polyester fibers reduces water migration. They prevent water or moisture from entering and migrating throughout the concrete.

REDUCES REBOUND IN SHOTCRETE

MiniFIBERS' cut Polyester fibers aid in reducing the "splattering" of shotcrete.

SAFE AND EASY TO USE

MiniFIBERS' cut Polyester fibers are environmentally friendly and non-hazardous. They easily disperse and separate in the mix.

ECONOMICAL

Use only 1.5 pounds of MiniFIBERS' 1/2 inch Polyester fibers per cubic yard of concrete to achieve all the above advantages in your concrete products. Only 3/4 pound of MiniFIBERS' 1/4 inch Polyester fibers per 200 pounds of stucco mix will prevent cracking and sagging.

Short Cut Polyester Fibers available from

MINIFIBERS, INC.

2923 Boones Creek Road
