ACRYLIC FIBERS
Uncrimped

Definition of Acrylic: A manufactured fiber in which the fiber-forming substance is a long-chain synthetic polymer composed of at least 85% by weight of acrylonitrile units, and no more than 15% by weight of vinyl acetate.

Standard Cut Lengths: 1/8”, 1/4”, 1/2”, 3/4”, and 1”
(3mm, 6mm, 13mm, 19mm, and 25mm)
Other lengths available upon request.

Standard Filament Sizes (denier per filament): 15.0

Shrinkage, (%): <6.0

Breaking Tenacity (gpd): ~2.0

Initial Moisture Content (%): <6.0

Average Moisture Regain of Acrylic (%): 1.0 to 2.5

Specific Gravity (g/cm³): 1.17

Effect of Heat: Sticks at 221-232°C/ 430-450°F. Shrinks into a mass at 240°C/ 464°F. Does not melt.

Chemical Reactivity: Good resistance to acids, except nitric. Good resistance to organic solvents and weak alkalis.

Dispersion: Easily dispersed in aqueous and non-aqueous systems. Surface treatment to aid dispersion applied as required.

Packaging: Fiber is packaged in corrugated boxes with polyethylene liners. Custom packaging available upon request.

The above information is provided to describe typical values and does not constitute a product specification.
